

CORNERSTONE ENGINEERING & SURVEYING

WEBSITE & VISIBILITY

Your Website, and Getting Found

A redesign, plus the pieces that get Cornerstone found online.

For **Mitch** | from Dean | June 2026

STRAIGHT TO IT

Where things stand

Mitch,

Right now it's solid, but it could look a lot better. I've been looking at other engineering firms and learning the visual language. I've redesigned your site from the ground up, and I think the new design would serve Cornerstone better.

There are also some things going on behind the scenes that are quietly keeping you from showing up when people search for an engineer or surveyor in the area. I'd like to add a few pieces to your site that fix that.

If anything here interests you, we can talk pricing and timeline. Or hand me the whole thing in one pass — I'll prioritize, make the executive calls, and you sit back and relax.

FIRST IMPRESSION

Make it look like the firm you are

Your site works. It just looks like a template, and you're not a template. You're a firm that measures things down to the hundredth of a foot, and the site should feel that way.

So I redesigned it with that in mind: clean lines, sharp edges, real structure. None of the soft, rounded, app-store look it has now. A strong first screen. Consistent, professional photos. It should look like a firm people trust with a multi-million-dollar site plan.

I've got the new design mocked up. I'll show you.

GETTING FOUND ON GOOGLE

Two things decide whether people find you

One — your site showing up in searches. When someone searches “civil engineer” or “land surveyor” in your area, you should be there. Right now the site isn't built to tell Google who you are or where you work, so you get skipped. I can fix that.

Two — your Google listing. That's the box with your pin, hours, and reviews on Maps and at the top of search. You don't have one. It's a crucial element for engineering firms to be seen today, and

it's completely free. I'll set it up, fill it in, and get it verified. An office address tied to it makes it stronger.

TURNING INTEREST INTO CALLS

Make it easy to reach you

Once people find you, the site should make it easy to take the next step:

- A simple contact form, so someone can reach you in two clicks instead of copying an email address into their phone.
- A page that shows your work — real photos of real projects. In your business, seeing what you've built earns more trust than anything I could write.
- Clearer descriptions of what you do, so the right clients immediately know they're in the right place.

YOUR EMAIL

Bluehost is holding you back

Your email provider, Bluehost, isn't the best option, in my opinion. It has real limitations that can hurt productivity, searchability, spam handling, storage, and more.

I'd move you to Google or Microsoft business email. It costs a bit more each month, and it's worth it: mail that's reliable and doesn't get flagged as spam, a calendar your whole team can share, real storage, and apps that actually work on your phone.

Nothing gets lost, and nobody's email address changes.

I copy every old message over before anything is switched off. The team keeps the exact addresses they have now.

STOP PAYING ME FOR SMALL STUFF

Update the site yourself

Right now every small change — a new hire, a new phone number, a tweak to a service — runs through me, and I bill you for it.

I'd rather build you a simple page where you make those everyday changes yourself. A few clicks, no code, nothing you can break. You'd only call me for the big work, and you'd stop paying me for small edits.

WHAT I NEED FROM YOU

A few small things

Give me these and I'll handle the rest:

- A few photos of recent projects. Phone photos are fine.
- The go-ahead to set up your Google listing.
- Your office address, if you want the local search boost.
- The two new team members' names and titles when you get a second.

YOUR CALL

Pick what you want

That's the rundown. Pick the pieces you want, or hand me the whole thing and I'll run with it. Either way, just say the word.
